BudMajic A+B

[NUTRIENT SYSTEM FOR
HYDRO, COCO COIR & SOIL]

The **BUDMAJIC A+B** system provides professional grade nutrition for heavily fruiting plants. It covers all system variables to ensure ease-of-use and optimum plant yields.

The BudMajic A+B Nutrient System

NUTRIENT

BudMajic A+B

BudMajic is a single A+B formula that provides solid performance from seed through to harvest. It runs much cleaner than other 2-part nutrients and requires far less pH maintenance. Formulated from high purity mineral salts and chelated trace elements. Suitable for hydroponics, coco or soil.
Pack: 1L / 5L / 20L

ADDITIVES

Roots

Root Enhancer: Promotes vigorous root growth for maximizing crop speed and helping prevent transplant stress. PGR free. Dose 1.5ml/L.
Pack: 250ml / 1L / 5L / 20L

BudGenie

Bloom Booster: Specialized bloom booster for promoting essential oil content and fruit weight. PGR free. Dose 2.5ml/L.
Pack: 250ml / 1L / 5L / 20L

GroStorm

Organic Booster: Organic compilation of kelp, fulvic & humic acid, plus natural vitamins and hormones. Dose 2.5ml/L.
Pack: 250ml / 1L / 5L / 20L

CMX

Cal mag plus all trace elements: For preventing deficiency symptoms in heavy feeders or where poor quality water is used. Dose 0.5-1ml/L.
Pack: 250ml / 1L / 5L / 20L

BudStorm

PK Additive: Promotes strong and vigorous floral blooms. Contains potassium, phosphorus and organic flowering stimulants. PGR free and pH neutral. Dose 1ml/L.
Pack: 250ml / 1L / 5L / 20L

StopBloc

Prevents Blockages: Helps prevent irrigation line blockages and root-zone build-up. Dose 0.2ml/L.
Pack: 250ml / 1L / 5L / 20L

SilikaMajic

Silica Additive: For promoting stronger vegetative growth, increased weight & shelf-life of fruit and greater tolerance to heat stress. Indefinite shelf -life. Dose 0.2ml/L.
Pack: 250ml / 1L / 5L / 20L

Pythoff

Nutrient Conditioner: Prevents root browning and eliminates food sources responsible for attracting root-zone pests. Dose 0.2ml/L.
**Not compatible with Flairform Roots or BudGenie.*
Pack: 250ml / 1L / 5L / 20L

The BudMajic A+B Dose Chart

	BudMajic A+B (ml per litre)	Roots	BudStorm	GroStorm	BudGenie	CMX	StopBloc	SilikaMajic
Cuttings & Seeds	Add this amount of BOTH A & B 1.7ml (Hydro / Soil / Coco)	1.5ml/L					0.2ml/L	0.1ml/L
Vegetative (Grow) once roots & foliage are strong	Add this amount of BOTH A & B Hydro 2.8ml Coco 2.2ml Soil 2.0ml	1.5ml/L		2.5ml/L		0.5ml/L	0.2ml/L	0.2ml/L
Bloom - Stage 1 once floral buds appear	Add this amount of BOTH A & B Hydro 2.8ml Coco 2.5ml Soil 2.0ml	0.7ml/L	1ml/L	2.5ml/L	2.5ml/L	0.5ml/L	0.2ml/L	0.2ml/L
Bloom - Stage 2 14 days prior to harvest	Add this amount of BOTH A & B Hydro 1.7ml Coco 1.7ml Soil 1.7ml		1ml/L	2.5ml/L	2.5ml/L		0.2ml/L	

STEP 1. Dosing

Fill the nutrient reservoir with water then add BUDMAJIC 'A' followed by BUDMAJIC 'B' and the additives. ALWAYS add in the sequence shown in the chart (from left to right) and stir thoroughly after EACH addition. SILIKAMAJIC must be pre-diluted into about 1 litre (1 Qt) of plain water before being added to the reservoir.

STEP 2. pH Control

Check pH is between 5.0 and 6.5. Check pH using the PH TEST KIT and adjust using PH UP or DOWN.

STEP 3. Feed frequency and volume

Hydroponics & Coco: Use this nutrient solution with each watering.
Soil: Generally use this nutrient solution every second watering.

STEP 4. Maintenance

- Apply Pythoff for root problems such as root browning or fungus gnat infestations.
- 'Recirculating' hydroponic systems: Maintain pH as in Step 2. Keep reservoir topped up with water. Do not allow EC to fall more than ~20% below the target EC (maintain by adding BudMajic A+B). Discard, flush and replace nutrient solution every 7-10 days.
- Run-to-waste, Coco Coir or Soil systems: Occasionally collect some run-off and measure its EC. If it is more than 0.5mS higher than the EC of the input nutrient solution then flush through with a milder solution (or pure water). For example, if the nutrient solution has EC 1.7mS but the run-off measures 2.3mS (or more) then it is time to flush.

Flairform pH Test Kit

800 tests for pH range 4 to 9

Flairform pH Up and pH Down

The safe (non DG) alternative for pH control

TwinTech Starter

For maximum survival rates in cuttings

We utilize the highest grade of ingredients available for plant nutrient products. Every batch of Flairform is manufactured by our in-house senior chemist and quality tested before being bottled. This ensures every bottle performs to specification. Growers can be confident of achieving consistent yields from crop-to-crop.

BudGenie

[FOR BIGGER & BETTER
YIELDS]

- Aids photosynthesis to improve essential oil output and fruit weight.
- Specialized flowering additive for use with PK additives. PGR free.
 - Does not cause foul growths or odours in the reservoir.
 - Dosage 2.5ml/L during bloom.
 - Pack: 250ml // 1L // 5L // 20L
