Version 15 Mar 2024: For further information see www.flairform.com | This dose chart serves as a guide only. No responsibility for any errors or omissions is accepted.

Instructions (Hydro / Coco / Soil)

STEP 1. Dosing

Fill reservoir with water then add each product. Stir thoroughly after each addition. If using PYTHOFF, always add first to the reservoir. NEVER add any chlorine, peroxide or pre-mix products in concentrated form. Do NOT use beneficial bacteria with PYTHOFF.

STEP 2. pH Control

Immediately check pH is between 5.0 and 6.3. For hard waters, the nutrient will be more stable if quickly lowered to between 5.0 and 5.5. If pH is too low, it can be raised with 0.10-0.25ml/L SILIKAMAJIC.

STEP 3. Notes

- **Hard water chart:** Generally applies if water's EC is 0.5 - 1.0mS.
- **EC:** Only use if meter is checked prior in 2.76mS calibration solution.

- **To raise/lower EC by 0.1mS:** Raise/lower GREENDREAM-1 dose by 0.4ml/L.
- **Nutrient stability:** Keep the reservoir covered and avoid using an air-stone.
- **Flush root zone every 7-14 days:** Use 0.2ml/L PYTHOFF in water. Ensure pH 5.0 - 6.0.
- **Deficiency symptoms:** Feed more regularly, or increase CMX dose by 0.5ml/L.
- **Foliage burn:** Flush more regularly and feed until 10-20% run-off.

The GreenDream-1 Nutrient System

GreenDream-1

Homogeneous 1-part base nutrient that provides vigorous and flawless growth from seed to harvest. Compared to 2-part nutrients, GreenDream-1 provides superior flower quality, is easier to use, runs cleaner and is more pH stable. GreenDream-1 contains premium grade ingredients including fully chelated trace metals such as Iron DTPA. It is suitable for hard or soft waters in hydro, coco or soil.

Pack: 1L / 5L / 20L / 1,000L

Roots

Root Enhancer: Promotes vigorous root growth for maximizing crop speed. Helps prevent transplant stress and stall.

BudGenie

Resin Enhancer: Specialized bloom booster for promoting resin and oil content, and improved fruit weight. PGR free.

GroStorm *(New formula 2023)*

Organic Booster: Purified organics that promote more branching and bud sites, and enhanced yield quality and dry mass. Fully soluble and compatible with fine drippers.

CMX

Cal-Mag-Iron + all trace elements: For preventing deficiency symptoms in heavy feeders or where poor quality water is used.

BudStorm

PK Additive: Promotes strong and vigorous floral blooms. Contains potassium, phosphorus and organic flowering stimulants. PGR free and pH neutral.

StopBloc

Prevents Blockages: Helps prevent irrigation line blockages and root-zone build-ups. Compatible with organic additives and beneficial bacteria.

SilikaMajic

Silica Additive (Mono-silicic acid): For promoting stronger vegetative growth, longer shelf-life in fruit, and improves tolerance to heat stress. Indefinite shelf-life and highly concentrated.

Pythoff

Nutrient Conditioner: Prevents root browning and eliminates food sources responsible for attracting root-zone pests. Fully compatible with all Flairform products.
